

Mail Autodiscover aktivieren und testen unter Plesk

<https://nissel.it/index.php/2021/01/27/mail-autodiscover-aktivieren-und-testen-unter-plesk/>

In Plesk aktivieren

In den Mail Einstellungen der Domain kann autodiscover aktiviert werden.

Mail >

Mail Settings for nissel.it ...

Email Addresses **Mail Settings** Outgoing Mail Control

This is where you can change the mail service settings for this domain.

Activate mail service on this domain

What to do with mail for non-existent users *

Bounce with message

This address no longer accepts mail.

Forward to address

sven@nissel.it

The address should belong to the selected domain. Only the adm external address or one address for several domains.

Reject

Webmail

SSL/TLS certificate for webmail

SSL/TLS certificate for mail

Use DKIM spam protection system to sign outgoing email messages

Enable mail autodiscover

See how it works in the [knowledge base](#)

Mail Settings

DNS Einstellungen

Wenn der DNS Server nicht über Plesk konfiguriert wird, sollten auch DNS Einträge erstellt werden.

```
_imaps._tcp.nissel.it. 86400 IN SRV 10 10 993 nissel.it.  
_smtps._tcp.nissel.it. 86400 IN SRV 10 10 465 nissel.it.  
_pop3s._tcp.nissel.it. 86400 IN SRV 10 10 465 nissel.it.
```

Testen der Konfiguration

Dies kann natürlich mit einem Mailclient getestet werden. Oder die Konsole. Dazu muss eine request.xml erstellt werden.

```
<?xml version="1.0" encoding="utf-8"?>  
<Autodiscover xmlns="http://schemas.microsoft.com/exchange/autodiscover/mobilesync/requestschemata/2006">  
  <Request>  
    <EmailAddress>sven@nissel.it</EmailAddress>  
    <AcceptableResponseSchema>  
      http://schemas.microsoft.com/exchange/autodiscover/mobilesync/responseschemata/2006  
    </AcceptableResponseSchema>  
  </Request>  
</Autodiscover>
```

```
curl -d @request.xml -u sven@nissel.it -v https://nissel.it/autodiscover/autodiscover.xml
```

Plesk: 18.0.33

Ubuntu: 18.04.5
